STORAGE ZONE - A

RECEIVING

Good quality Basil should be highly aromatic and tender with slightly crinkled leaves that range in color from bright green to greenish-purple. The product should be fresh and healthy. Product should have good leaf to stem ratio.

AVOID / REJECT

Avoid Basil that is showing signs of deterioration, wilting, black spotting, or dehydration.

STORAGE / HANDLING

Store Basil in the warmest part of the cooler in either its open original bag or a vented plastic container. Ideal storage temperature is 48-52 degrees F. Herbs are ethylene sensitive which may cause yellowing or loss of color; avoid storage near ethylene producing items.
